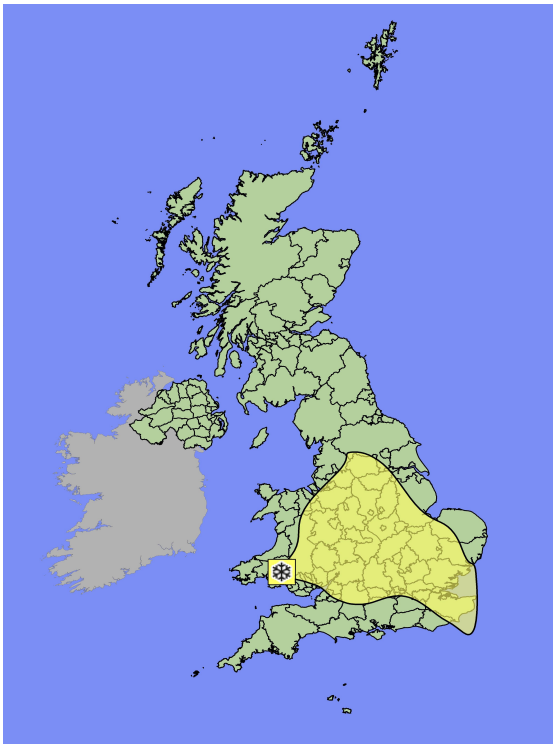
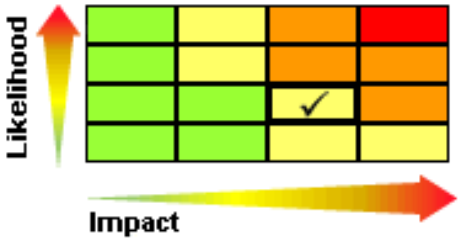
National Severe Weather Warning Service





Chief Forecasters Assessment
A front moving into Britain will stall during Sunday. As a low pressure centre forms along the front, cold air will be drawn into the frontal zone causing the rain to turn increasingly to sleet and snow in places through today.

Even at this late stage, there remain uncertainties concerning the timing and extent of this snow, with parts of the warning area likely to be relatively unaffected. Uncertainty increases further regarding the possible spread of snow across parts of southern Britain overnight.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **06:00 on Sun, 10th Feb 2013** until **09:00 on Mon, 11th Feb 2013**

Rain is expected to gradually turn to sleet and snow as it spreads eastwards during Sunday. Settling snow will be mostly limited to the south Pennines at first, but is likely to become rather more widespread by evening. Even then, cover is likely to be variable, with some places seeing very little, others 2-4 cm and with the potential for 10 cm or more over parts of the south Pennines and 5 to 10 cm for Kent, and more locally over the Midlands and Essex.

Overnight into Monday morning, there is a risk of an area of snow moving westwards across parts of the south Midlands, east and southeast Wales and southern England, with a few cm in places, particularly over higher ground. This warning is updated to cater for this risk.

The public should be aware of the risk of disruption, particularly to travel.
